(54) COMPUTER NETWORK SYSTEM AND PORTABLE COMPUTER

(57)Abstract:

PROBLEM TO BE SOLVED: To enable connection and utilization of a portable personal computer(PC) even when a manager is absent by performing resource setting processing while receiving the contents of resource information transmitted by a 1st computer when a 2nd computer is connected to a network line.

SOLUTION: When a user connects a notebook PC 4 to one of information consoles 3a, 3b and 3c such as 3a, for example, a resource setting processing part 41 of the notebook PC 4 broadcasts a resource request message to a LAN line 2. When a service processing part 11 of a server 1 receives the broadcasted resource request message from the notebook PC 4, a resource information data base 12 is retrieved, resources usable for the notebook PC 4 are extracted and a list (resource information list) is prepared. This resource information list is transmitted through the LAN line 2 to the destination of the notebook PC 4 which first transmits the resource request message through the service processing part 11.

LEGAL STATUS

[Date of request for examination]
[Date of sending the examiner's decision of rejection]
[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
[Date of final disposal for application]
[Patent number]
[Date of registration]
[Number of appeal against examiner's decision of rejection]
[Date of requesting appeal against examiner's decision of rejection]
[Date of extinction of right]
